> 智能纪要：Project Work Review Meeting 2026年10月13日

说话人 1 00:00:00
With the car and the FD.So actually for the document, for our activity on the investigation report, I'm gonna have the.Including investigation actually in live.And also we propose the top up based on our discussion GMT.So probably that's to review this report.So I think maybe in a short time, maybe in early next week, we can balance this into the investigation report.

说话人 1 00:00:50
Actually, we have done the spy.This is the impurity marker for our rating and the sparking in the I'll want and for downstream and Lark.So we have specification for that impurity. I think currently for that impurity, the.Specification is the number 1.5%.And we also want to find the cost currently to the hour is the time from maybe the cost after the.So we also have a proposal tsp in the previous planning for two for.That's all right.So I'm gonna have this document to start to ask for the other area for the equipment training.We have a, we have done passing and the time to be adding.

说话人 1 00:02:00
Start the F1, actually F4,F1, maybe October and start, but you know, the, the, the, the, the, he actually, he documented that way.You need to receive the power report and also you can get that. Yeah.Okay, so also the video that already operation schedule was listed here, but just as mentioned, it will be updated based on the skills.

说话人 1 00:02:36
So for L2, I think the kind of estimation I need to master most for.I see you already only the 3 days have to let it to be finalized soon. And so this one for the PQ strategy one.One ask to get corresponding to one.So create. So this for asking the strategy to move straightforward.Okay, so

before we go on to the equipment test of our machine, they turn to the comment.I think for I was three step one, we only have this two.

说话人 2 00:04:00
Okay, so you want.

说话人 2 00:04:21
For the passivation and cleaning is passivation is already finished and still in the in progress of the cleaning.And for the L2 and also we're doing the cleanings, doing cleaning and for the L3.So this one is already, fin is already, and the rest of them are still doing the cleaning.

说话人 2 00:04:49
So our Solar Run competition day will be 18th,19th,17th of October.And also we need one day for the cleaning after the solar run.So the equipment ready day, it should be one day after the solar run.

说话人 2 00:05:06
Completion date.So for the 20% part of the solution is gonna be the solar run up be completed by the 17th.And when they after like 8 is up for that is any of this could be shared with G and the center? Are they completely.

说话人 3 00:05:49
Sorry, after that Celebration, we usually use that pure water.

说话人 2 00:06:43
3 for the left tables, we say specification of natural drink from the from Korea from like different country, for example, China, US or Europe. And we also compare the specification of natural.Yeah, from the from Copia with compare with the standard vision of the SMP.So as you can see, for example, the purity of the and I'll be is 99 point 99 and 99%, which is much higher than the from Copia standard.And also the oxygen seal G stage 4 and water content, it's much like higher than the normal copy of this.

说话人 2 00:07:44
And for the testing frequency of and at the very spots stage, we usually take test during the IQ stage.And then we gonna do the testing during the qualification after our modification.And after

that, we usually take the test for every 6 months for class B area or every quarter for the Class B area.

说话人 2 00:08:14
For the sampling plan, it should be determined according to the risk assessment.So first, it should be the total issue point.Second is nitrogen use for headspace during the production packaging.And then the nitrogen use for product drying, surrounding and milling.And then the last is the process nitrogen use point from the nitrogen source and the middle use point.

说话人 2 00:08:45
For the sampling plan, we do the sampling or welcome page or in PTF impact plans or cross and models for that period, periodic periodical color review. We do it in.

说话人 2 00:09:05
Annually, the annually performance review on the natural distribution system is required to include like any did any deviations and changes or any exception events and maintains or summary of the analyze report management.

说话人 2 00:09:42
So that's how the nitrogen goes from the liquid nitrogen tank and then go to the use in the production meeting, which is miss the part we usually it's start from the liquid nitrogen tank, then go to the waterizer, like those separate.To possibly and go to the buffer tag.And after that, it goes to like 2 power of natural filter for the 1 and 2 and then go to filter 3 and 4 and then it gonna transport to the use five.

说话人 2 00:10:25
For the source representation of the with the picture was just questions from the qualify window and release place the window 0 a against that against the SMC internal specification for the management of the future so that the future are installed at 2 education, 1 is the right after the total issue time.And the other is at the start of each distribution branch.So at each point, two natural users in like in parallel.And there is still two motor backup in case one like driver and then maintains after changing your user into your test is necessary to.

说话人 2 00:11:15
For the requirement of the check roll, the check roll is required to be installed at the main complaint and the front of each measuring equipment. What, where do you sample from?

说话人 4 00:11:30
The sending point, you got to see the first one is the two pieces point that from the time farm and for point two, point three and point four that within the production building.

说话人 5 00:11:52
Okay, so you do pretty much quite use an energy.Do you do a whole analysis on such an easy cam or is it external?

说话人 6 00:12:02
let me check. 这个空气的检测是咱们自己检的，还是？咱们的微生物实验室， by our task, we have the method by already like.

说话人 4 00:12:14
OK.from the source.

说话人 1 00:12:16
OK.

说话人 3 00:12:42
one, so you have multiple products.yes.

说话人 1 00:12:56
one mistake, one mistake about supply order.

说话人 6 00:13:13
就是周期性检测，可以都是微生物来检测。

说话人 4 00:13:45
Okay, next let's show the material overview of the IPA.So after release, production that and build the requirement on the IPA system. And after.Said I department that got the departments here will this will be the material from the scanning the battle. After scanning, the material will temper to manufacture time.And the whole material delivery for that control by CMS.And yes, material delivery system and after delivery production that receive the material and in the external surface after cleaning.action that transfer to transfer material to the cover room and。

Receive by scan the truck and he will form the material name for that number by number validity period on the operation number.I think for the form, yeah, confirmation of material number.You have the by we will have the label and I'm.Yeah, this picture shows the material, check the date, and then they say the delivery date and they say the receive time. Okay, so that's, yeah, and after.Confirm and the cleaning material transfer to product area and we will check the material name, for example, the number, the whole information, then into the and add the material no remaining after you.

说话人 3 00:16:19
This material is completed.If we have the remaining after you, the material will return to warehouse, to storage.If we will use that time.It is a hassle and have a have material remaining in production after this before.

说话人 4 00:16:42
It goes actually like this.Generally, if we confirm this material now you in a long time video time for to work on it. Okay, straight away. Okay.

说话人 5 00:17:03
I would like to walk down that bridge, but I would like to see the, you know, warehouse, how it's transferred to operations perspective each 9 and 7, where entrance, production building and just walk the flow. But I'd be able to do that this week.So you mean you want to chat?Yeah, so I can just walk with me, see the material transfer.But if someone would be able to walk with me and say, this is where we, this is where it's stored, this is how it's delivered, this is the door comes into, this is where it's charged. Just walk the map.

说话人 4 00:17:45
Yeah, yeah, this is the whole workflow.Maybe just said that the receive time and transfer to production area during the charging into the reactor.

说话人 3 00:18:00
will record the china hat， so they they the whole。

说话人 5 00:18:05
我我我就想去看一下。

说话人 1 00:18:07

是，他是想去现场直接看一下。OK。I don't think we have the production activity for digital ads and the number, but generally we have the material transfer activity every day.But for other projects, if you want to actually check that, but I, I don't need to see the actual transfer.I just want to see the reach.So like I don't see you more. I don't have a lot of.

说话人 4 00:18:39
from warehouse to to。

说话人 1 00:18:42
对，他只是现场看一下转移的路线，不一定要看实际的这个，对对对， OK。

说话人 1 00:19:00
所以就是去现场看一下整个物流的活动，不一定说真实的物料。

说话人 6 00:19:05
啊，可以可以，随时可以。

说话人 1 00:19:07
so, they will discuss in some way.ok, so any more comments?no.ok, so quality system.

说话人 7 00:19:27
ok.so, yeah.And so this one will be the Document Numbering Management.So basically, the document numbering rules will be refers to the 18 cans SOP, the Document Numbering Management Procedure VS that QA zero zero two so 1.So, so once the so this document number must be issued by the QA.So once the numbering being issued, the document list QF01198 should be filled immediately with the number.So, and also this document list is called by QA.So make sure that only the QA, QA qualified QA will be able to assign a column document number.For each specific document to avoid repetition.So here we're showing an example of the document list.So using the Chan change controls as an example.So firstly, you've got the, the site, the issue site.So, and also for the document type, including all the document that might associate with the project.And we also write down the DOC, the numbering rule.

说话人 7 00:20:48
For example, in change will be changed dash project number, dash step number, plus the sequence, it's two digits and that the version number.So they also have the reference document, which is the DS QA zero two.So the bottom one is the list for each document.

说话人 7 00:21:11
So here we give an example for GDN7.So for example, here we have change, that's CPO 1,3,9,7,88, which is the project call for GDN7 in 1810.That's 0,3 is the campaign number and sorry, yes, campaign number. And then.UH01 is the step number and then the next 0,1 is for the first change control document DOC 01 is the version number and we also have the document description change for whatever this change is and also have the field date.And for this, like sign here, and for the final column is the document approval confirmation.So at least if the change control, if the change has been approval, then this approval data will be filled.But if for any reason that this change even being approved for specific reason.It will be take with the not final approve with the written down and this change control number.Since it's not approve, it will be able to goes to the next approve Change Control number.And this whole rule will apply to all other documents as well.

说话人 5 00:22:39
Okay, so it's was just in relation to one reason that saw our number check was used for council and then use for another one that would be marked as not type approved reason given, but as well as just from a GDP perspective, we shouldn't assign that number check.Yeah, so my understanding is that going forward, it won't be.

说话人 7 00:23:00
Be using change control over it would stay what's cancelled or it's not approved.It would then be the work you need to get.That's correct.So you mean like from the GMV perspective, if it's not final approved, the change control, that number should stay with that. Yeah, control.

说话人 5 00:23:22
Yeah, so yeah, okay.And what I'm interested in is an example of one of those forms relating to one of the products.Just have a look at it.And another question I have then is once, at what stage does the feeder reference number gets signed?And would it not be easier just to go with the V for reference or say about having to change control of reference numbers association with the one documents?

说话人 4 00:24:33
We will ask the change control number here first, and then we will fill the information into the change control calling form to internal review and review by Lily.And then after level less, no further comment being asked. And Lily.And then that's change to the information will be filled in the PMS.So at that time, the change to number will be filled in the PMS. And the change number

in the PMS system is.Automatically issue.So that change number has been validated during the computer, right?System validation show that number would be repeated. So what really is.

说话人 5 00:25:37
Proving is this change number or what is the applied is to be as a different change number.And I suppose are we signing off and approving the document on this change and then uploading that document onto diva? Are we typing in the information into diva?

说话人 4 00:25:58
Is this an upload job or documents?And then are we transcribing information across?Do you want the approval?Because the all the information and the treatment number has been identified in.in that system, so, during the approving, SK will will the related person in each department within SK will assign.And that change in the rebasis.And then as can we upload, download that all the change control package and send it to Lily or Lisa.So at that downloaded change control, this number and this change your number and the.Check your number from the Q&M system are also fixed on that on that downloading recommendation. So what Lily approved is already.Already.I think that's all already.Let me see for you.Did you show the information manually or upload the document directly to me?

说话人 5 00:27:39
Yeah, I think it's possible maybe to see one of our change controls that's already been approved, just to see it live on video on screen.I don't understand how it's done.I'm not sure whether we're uploading a document, whether we're putting in videos manually, or what we're doing it.So if that's possible to see, yeah, we've already put one of the documents just to see it on the screen.Then I must have a better understanding of how I've done.But what we're proving is the final document downloaded from Vika, we approve that and then that's also approved.Okay, we will do, we will at the example.Yeah, I just go there.I suppose it's quite similar question applies to deviations are managed exactly the same way. Yeah.

说话人 3 00:28:32
这个这个这个我说的话。

说话人 7 00:28:36
对，所以我们也会提供一个例子。

说话人 5 00:28:47

对，我觉得这个是个好建议。

说话人 1 00:29:08
Yeah, okay.I think that's all the top.I would like our super team.I will confirm with our colleague working on the document preparation for L3 Step 1.So if possible, maybe we will discuss after the session. And also this afternoon, we will prepare the.The role for the material transfer.Okay, for you to next review.And also during this, we can prepare a sample to make this.Now, do you want to share that? Okay, take away from your side.So maybe this time is to first check the material.

说话人 3 00:30:30
That's all of the material, equipment, seeds, performance, just a list of parts has been in the equipment performance.Okay, so from installation to qualification through cleaning, sound stuff.

说话人 3 00:31:16
觉.

说话人 6 00:33:55
你好.

说话人 3 00:34:02
然后然后这个钱是。

说话人 4 00:34:08
这个这个钱是。

说话人 6 00:35:16
不用身份证号，不用安排号，不用盯着你的号，这是单独编号的原则，对我们内部。
