说话人 1 00:00:00
Of procedure, so it will be quite a lot of time in between that.So it will be quite challenging to go in between the reviewing process and create a base order of version. You can generate the.

说话人 2 00:00:20
The record and legal.Get the number and then have your draft.I'm speaking for yourself that it could, it's, it does pop up online when you have manual intervention, you're all more susceptible to having a deviation.I mean, I don't think that you have to because nothing wrong with what is being done.What it is leaving more at risk of deviation when you have.

说话人 1 00:00:43
I know this.I think this discussion have been like continue for a bit between us.So one of the considerations we have is what people generate is a random number.And for us internally, it will be quite difficult to actually differentiate in between this product number and also this ultimately generated number.So it will be a bit difficult for us to manage it in that, that internally.So that's why we end up decide to just have our menu generating number and also the Viva generating number.But because all the numbering are only generated by QA, and also that the dedicate QA will be able to issue the number.So for us, it should be easy to manage.But also we can like again, discuss internally to see whether that would be easier to just manage by these different number or it will be easier.

说话人 2 00:02:00
That's like a result of the issue.Most like technically there's no issue with something done.The other option, I don't know, we've analyzed first, but it might have to be around part number because they can sort by very quickly our generation of work.Like, I don't know if I like that most.It could be another option there just for ourselves because it was, it's more working for

training, which generate number tracking number, chase down the person who has the number.You know, I've been completing the codes that we've done yet.

说话人 1 00:02:30
Yeah, so yeah, so we will consider how we measure will be easier, but we can definitely understand your perspective.Cuz it's, yeah, two numbers will be hard to measure.And we would definitely looking into the ways to recommend all those things. Yeah, thank you.

说话人 3 00:03:05
This is the same for deviations.Yes.Yeah, this is the same for project for deviation, but I just ask the same question.So they have to ask because they're saying that they need to use the project, that it must be manually.

说话人 3 00:03:39
want to improve that product.

说话人 3 00:03:50
and this is the form.

说话人 2 00:04:01
I think it's very important to your everyday system so that when you release actions, you can see what's changed.Those are associated with what you need to associate or so that don't base on your micro forms.
